For over 40 years Bloom® has been the gold standard for electrophysiology stimulation. Now, Bloom® 2 sets a new standard in the industry.

Simplicity
Intuitive design allows users familiar with the original Bloom®, or even other systems, to be able to smoothly transfer to the Bloom® 2 within minutes.

User Interface
Modern touch screen display with no menus and no hidden functions. Just like the original Bloom®, all functions are laid out at the user's fingertips.

Tactile Feel
Recreates the tactile feel of the original Bloom® with buttons on the keypad allowing the user to increment and decrement by touch and sound.

Small Footprint
Reduced size for today's crowded EP rooms.

Four Channel Pacing
Bloom® 2 provides four channel pacing at 25mA.

Waveform Display
Simplify trigger setup for synchronized pacing with cardiac signal waveform display.

Clear error codes and explanations
Bloom® 2 displays error messages with clear text explanation instead of just a numerical error code.

Configuration Saving
Save multiple preferred pre-protocol setups which can be recalled at the touch of a button.

Safety
Built-in battery backup and emergency pace function.
